

SEEBURGER E-Invoicing Solution

KAESER Kompressoren uses SEEBURGER E-Invoicing Cloud Services

for real-time VAT reporting to the Hungarian tax authorities (NAV) via RTIR (Real-time Invoice Reporting)

Digital Invoicing ensures transparency and economic efficiency in many companies. In more and more cases it is also becoming legally binding and tax-relevant. In Hungary real-time VAT reporting to the Hungarian tax authorities (NAV) is required by law since 1st of July 2018 for invoices issued between domestic taxpayers.

KAESER compressors already use various E-Invoicing solutions with SAP integration as cloud services from SEEBURGER, e.g. for ZUGFeRD. Due to the increasing number of country-specific directives, KAESER is pursuing an all-in-one strategy for B2B/B2G E-Invoicing services and has therefore also implemented the E-Invoicing solution in Hungary via the corresponding cloud service extension from SEEBURGER. The reporting data is now delivered to NAV securely and efficiently via XML files in real time.

“ With SEEBURGER we have found a service provider that implements all requirements for global E-Invoicing in compliance with the law and offers them economically as a cloud service. This central E-Invoicing strategy puts us in an excellent position for the future. ”

Dietmar Maurus, IT Manager, KAESER Kompressoren
