

LESCHACO – Forwarding is our passion. Since 1879.

SEEBURGER manages Logistics

“SEEBURGER manages logistics” stands for the central integration approach by which the SEEBURGER Business Integration Suite controls all processes between the central in-house Advanced Business System (ABS), LESCHACO’s track and trace system and its external business partners. It includes the integration of all customer orders, all carriers, all land, air and maritime shippers involved and the transshipment partners with their individual port community systems until the logistics process ends with the goods received.

The Business Integration Suite is first used to generate integrated EAI processes from the native logic of existing in-house systems. The next step is preconfigured B2B processes with standard mappings that control customer requirements uniformly, regardless of the industry. Central message tracking and alerting then facilitates worldwide control over the operation of the entire system via a central front end.

“We have been a satisfied SEEBURGER customer for more than ten years and have always appreciated and supported SEEBURGER’s standardization approaches. With what are now 370 mappings our team of five integration specialists controls nearly 8,000,000 transactions a year – round the clock, around the world and on the increase.

Together with universal tools for customized B2B process design we are prepared for tomorrow’s requirements. It is good to know that our SEEBURGER platform, like Leschaco itself, knows no bounds.”

Susanne Lotz of der Corporate IT, Team Manager, EDI and Process Development

About LESCHACO

The LESCHACO Group is a globally active owner-managed logistics service provider founded in 1879. With 42 companies, over 2,000 employees in more than 20 countries, and a network of selected agents around the world, Leschaco has developed its sea and air freight, tank container and contract logistics divisions. With its global logistics solutions the Group is a tried and trusted partner of leading companies in the plant construction and mechanical engineering, automotive, chemical and allied industries as well as in consumer goods and pharmaceuticals. For this portfolio, uniform worldwide IT environments ensure a high level of transparency and process quality to satisfy the most exacting customer requirements.
